# Nor’easter: completed event window · final model cycles

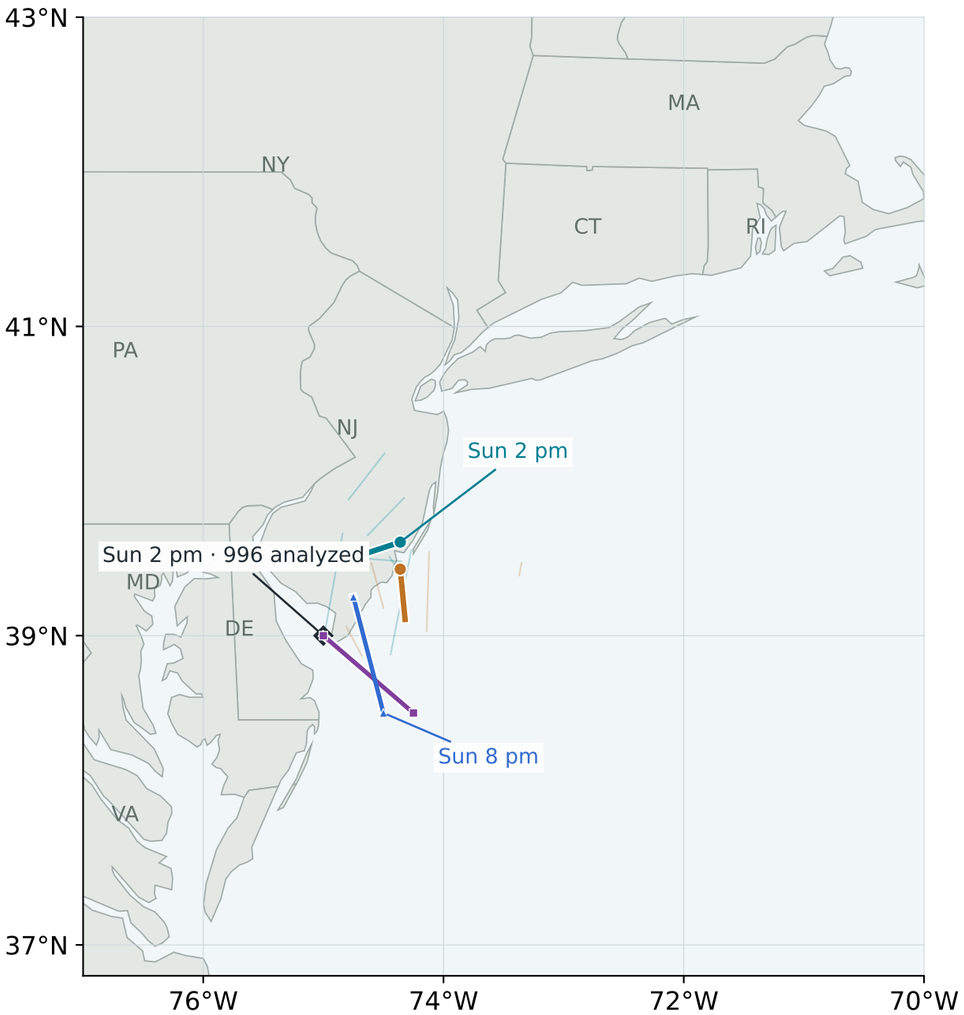

Final eligible cycles: Euro Sep 27 18 UTC · GFS Sep 27 18 UTC | Google retained: WN3 Sep 26 06 UTC · WN2 Sep 26 00 UTC

WN3 Sep 26 06: 6/64 (older) · NOAA Sep 27 18 UTC analysis · GFS Sep 27 18 UTC — deterministic

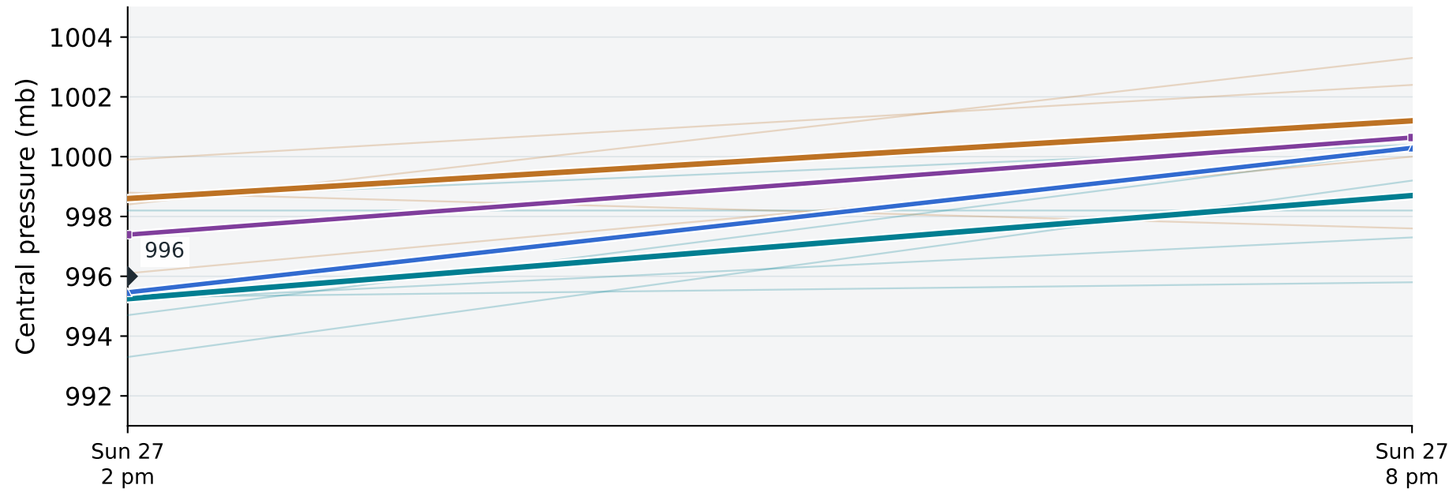

WN2 Sep 26 00: 4/50 (older) · Euro Sep 27 18 UTC — deterministic

Thin teal / orange: ensemble members • Thick teal / orange: medians • Purple squares / blue triangles: single model runs

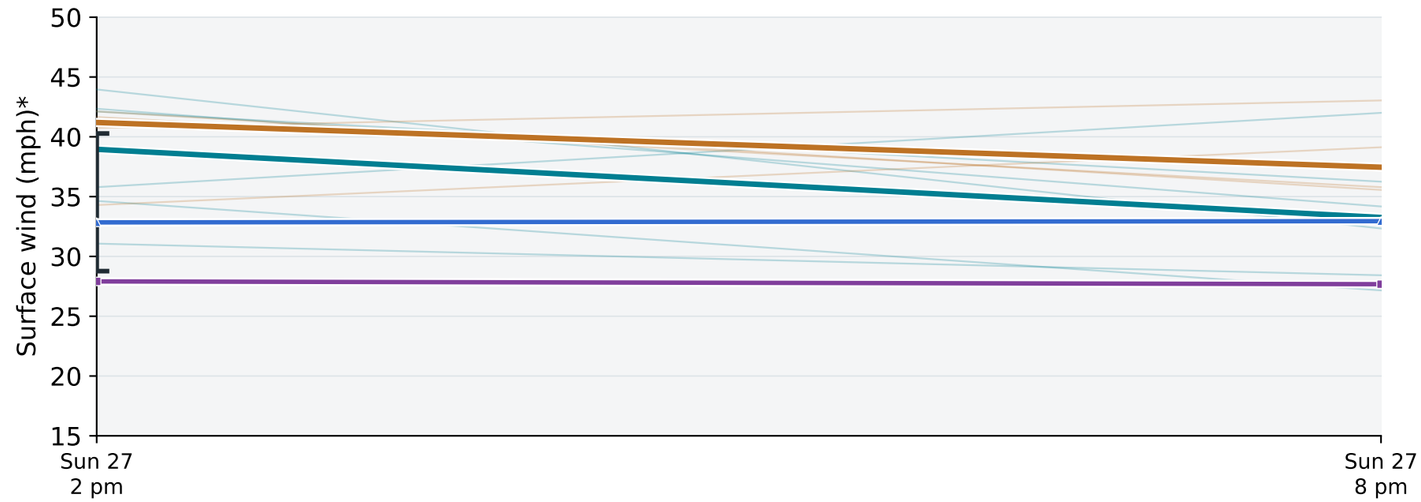

## Potential tracks + official baseline

## Central pressure: ensemble spread + Euro / GFS

## Surface winds: compare the diagnostics carefully*

September 2026 · all times EDT

**WINDOW ENDED SUN 8 PM EDT · VERIFICATION CONTINUES**

Euro / GFS predicted 1000–1001 mb at 8 pm. These are elapsed forecasts; no matching OPC center analysis is available yet.

*Euro / GFS: maximum grid 10-metre wind within 500 km; Google: cyclone-tracker maximum. These are different diagnostics, not local gusts.

Black bar: analyzed OPC marine-area wind range, not uncertainty. The whole window has elapsed. Euro / GFS 2 pm points are initial fields.

Sources: Google Weather Lab, ECMWF Open Data, NOAA NOMADS / OPC. Map: Natural Earth. Line density is not probability; medians use available tracks.
